

Agnes Consortium – At a Glance

The Agnes Consortium is a global initiative advancing equality. AI-powered maternal health solutions through collaboration, research, and ethical innovation.

At the heart of our work is Agnes: An AI-powered "midwife" that supports women through pregnancy, postpartum, and beyond with localized health education, triage, and care navigation. Agnes was designed to close care gaps in under-resourced communities while strengthening the health system's ability to reach women at scale.

We're not building in isolation. The Consortium brings together:

Public Sector & Health Systems

Ministries of Health, Medical leaders, MCOs

Technologists & Advisors

Ensuring responsible AI, and product integrity

Researchers & Academic Institutions

Advancing gender-equitable, regionally grounded

Funders & Catalytic Partners

Powering the scaling of mission-aligned pilots

Community & Nonprofit

Partners – Driving localization and last-mile access

2025-2026 Focus Areas:

- 3-4 countries
- Development of speech-recognition models trained on regional languages
- Expansion of our responsible AI ethics framework
- Co-authored research and impact evaluations
- Engagement with funders and public – private coalitions

How to Partner

We welcome collaborators across sectors – researchers, ministries, and Innovators – who share our belief that every woman deserves dignified, data-informed care.

Contact us to join as a funder, research partner, or pilot collaborator:
